

Arctur Enterprise + Cloud Services

New in Slovenia: Enterprise Cloud services with the lowest prices in the region

*At Arctur we offer a high-end cloud service called Arctur **Enterprise + Cloud Services (AE+CS)** that will enable you to fulfil all of your wishes for migration of your IT infrastructure into the Cloud. The services comprises of a wide range of options, from the rental of virtual servers, rental of a private cloud to the rental of personalized services in the cloud. Do not accept compromises – choose our high-end cloud services – for the lowest prices in the region.*

Our infrastructure of virtual servers (IaaS) is based on a cluster of top-end HP ProLiant servers and the VMware vSphere 5 Enterprise Plus virtualization environment. The cluster has enabled all of the modern services which ensure high availability, redundancy (resilience to failure of physical servers – automatic failover), security, uninterrupted functioning, back-up of data (back-up of whole virtual server with the option of a five-level restore inside the operating system of the virtual server and the option of restoration of the whole server) and optimal performances. High-Availability, SAN extendable distributed storage cluster, HotAdd CPU & Memory, Data Recovery and vShield are just a few of possibilities that are included in all of the rental options. Our policy is that we do not accept compromises – all services have all of the options enabled, you just choose the capacities you want (CPU, RAM, HDD, etc.). All capacities can be adapted upon demand so that you have the IT infrastructure tailored to your current business needs. Treat yourself to your own enterprise virtual server **from 13,50€/month** – no commitment, no hidden costs.

The more demanding of users that want to establish a closed environment inside our public cloud have the option of setting up a private network with the possibility of VPN access (IPsec) to access the virtual servers and cloud services – or even use the vCloud API for seamless automatic management of the services in the cloud. In addition to renting of the infrastructure we also offer pre-prepared platforms (PaaS) for hosting of your services. Open source LAMP or Microsoft IIS.net environment for hosting of your web sites and web systems and rental of modern messaging systems (advanced e-mail), and also a 3D rendering platform. Don't miss our HPC services offer, visit <http://hpc.arctur.net>. Inside the series of our SaaS offer you can also choose our project management software (4PM), the whole array of Microsoft software and some other software – all on monthly rental bases – no commitment, no advance licensing, no hidden costs. In this way you can rent the MS Windows Standard 2008 R2 operating system for just 6€/month.

We offer expert support for all our services thus enabling also the possibility of renting a managed service. If you need help in configuration, administration or setting-up the operating system, middleware, user software, security settings or managing the network – we are here to help.

So, welcome to our cloud! With our cloud service you will finally get a care-free IT! We are a certified VMware Service Provider Partner (VSPP) and our experts are VMware Certified Professionals on vSphere 5 (VCP5).
